

Collision prevention in the selected full scene, with a causal parameter intervention

The stronger model-compensated frozen comparison also succeeds

Continued online learning Hold available version at 3 s
Freeze at wind onset Restore original parameters at 3 s

Clearance: oriented XML sphere at recorded plant nodes; x: swept first contact.
Dashed after x: remainder of the final control hold, without contact physics; depth is not impact severity.
C: deterministic next-boundary execution. At 3 s, version 735 includes 55 calm +20 wind updates.
